

First Dog on the Moon

The first dog on the moon is called Neil Buddystrong.
As she laid her fourth paw onto the moon, she said:
‘That’s one small step for a dog,
And one giant leap for Dogkind’.
Those words were History.

The Cats were very jealous.
They had everything planned out,
But they didn’t find anyone to recruit.
The humans helped The Dogs build their spaceship
Because as every dog owner knows,
A human is a dog’s best friend.

Neil Buddystrong

The End and that's why everyone knows that dogs rule and cats drool!
